To whom it may concern

Subject: Letter of recommendation to the company CTE WIND Civil Engineering

Italthai Engineering Co., Ltd. ("Italthai") confirms that we contracted CTE WIND to undertake the structural foundation design for a wind power project.

Services were provided for the 180MW (60 Vestas V136, HH157m) Theparak 2 and K.R.S.3 Wind farms in Thailand where we acted as Civil BOP contractor for the developer, Wind Energy Holdings ("WEH"). During this period, the following works were executed by CTE WIND:

- Foundation Detailed Design
 - o CTE WIND designed an innovative soft-spot foundation solution taking into consideration the soil and turbine characteristics which allowed an optimization of construction materials (concrete & steel).
 - o The service also included the certification process of the design by DNV GL and technical support throughout the construction phase.

During this time CTE WIND provided expert support to our team with 3 design staff visiting the site and remote support from other offices to help us manage the challenges related to the demanding project program.

The work of CTE WIND has been a major factor in driving our progress on the project, ensuring that at all times we had smart technical partners fully committed to executing our strategy and protecting Italthai from technical risks.

I can therefore confidently recommend CTE WIND as a solid and reliable partner, and expert in their field.

Sincerely,

Chittapoo Usnabhiraks
Vice President - Project Division
Italthai Engineering Co., Ltd.
