To whom it may concern

**Subject: CTE Wind and Forte Renewables**

Italthai Engineering Co., Ltd. (“Italthai”) confirm that we contracted CTE Wind (“CTEW”) and its partner Forte Renewables (“Forte”) from July 2017 through December 2017, during which time they have provided our company with Foundation Design and Engineering Management Services.

Services were provided for the 180 MW (60 Vestas V136, HH 157m) Theparak 2 and K.R.S.3 Wind farms in Thailand where we acted as Civil BOP contractor for the developer Wind Energy Holdings (“WEH”). During this period the following works were executed by the CTE Wind+ Forte consultancy team:

- Foundation Detailed Design (CTE Wind)
  - o Including Certification of the design and design support at construction
- Foundation Construction Supervision (Forte)
  - o Including drafting and obtaining approvals for all Quality Management Plan documents, Design Interface Management and Construction Supervision and Sign-Off

During this time CTE Wind and Forte provided expert support to our team with up to 3 staff on site and remote support from other offices to help us manage the challenges related to the demanding project programme.

The work of the CTE Wind and Forte team has been a major factor in driving our progress on the project, ensuring that at all times we had smart technical partners fully committed to executing our strategy and protecting Italthai from technical risks.

I can therefore confidently recommend CTE Wind and Forte Renewables as solid and reliable partners, and experts in their field.

Sincerely,

Chittapoo Usnabhiraks

Vice President - Project Division

Italthai Engineering Co., Ltd.
