Bègles, 14th January 2016

Recommendation Letter on behalf of the company

To Whom It May Concern,

We hereby would like to recommend the company CTE Wind Civil Engineering, with which we have for many years enjoyed a successful and highly satisfactory work relationship, in terms of both efficiency and professional ethos.

CTE Wind Civil Engineering designed the foundations for many of our wind projects in France and abroad, amongst which:

- Sainte-Rose (Guadeloupe) with 12 GAMESA turbines (2015)
- La Luzette (France) with 7 VESTAS turbines (2015)
- Saint-Hilaire-de-Chaléons (France) with 6 SENVION turbines (2015)
- Parc éolien de Terres Froides (France) with 5 VESTAS turbines (2014)
- ...

All the designs complied with the applicable regulations and standards and were submitted in due time.

The know-how accumulated by CTE Wind Civil Engineering regarding the onshore wind energy sector and especially wind turbine foundations together with their considerable experience with all kinds of makes of wind turbines always allowed us to have their designs easily approved by the Control Authorities assigned by the Project Managers.

We therefore consider CTE Wind Civil Engineering to be a valuable and reliable partner.

Sincerely,

Jean-François CAUSSÉ
